1. RevOps360 - Sales Pipeline and Revenue Forecasting Suite

Domain: Business Analytics Slug: revops360-sales-pipeline-and-revenue-forecasting-suite-business-analytics Created: Unknown date

Summary

Build a business analytics platform that tracks CRM pipeline health, win probability, and monthly revenue forecasts by region and team.

Full Content

Project Overview

Case Study: RevOps360 Sales teams track leads, opportunities, and conversions, but leadership often lacks reliable forecasting. RevOps360 unifies pipeline data and builds a forecasting layer for weekly and monthly planning.

As a Business Analytics Intern, you will design KPI models, clean CRM datasets, and build forecast dashboards for decision-makers.

Key Objectives & Technical Architecture

Phase 1: Data Foundation

- Ingest lead and opportunity data from CSV/API.
- Build cleaned dimensions for sales reps, regions, segments.
- Define core KPIs: win rate, average deal size, sales cycle time.

Phase 2: Pipeline Analytics

- Stage-wise funnel conversion analysis.
- Cohort tracking by lead source and quarter.
- Bottleneck detection in qualification and proposal stages.

Phase 3: Forecasting Layer

- Weighted pipeline forecast model using stage probability.
- Compare forecast vs actual with variance tracking.
- Build scenario planning for conservative/base/aggressive targets.

Phase 4: Executive Dashboard

- Region/team drill-down visualizations.

- Weekly forecast alerts and underperformance flags.
- Export-ready board summary reports.

Prerequisites

- SQL, Excel/Sheets
- Python (Pandas) or BI stack
- Power BI/Tableau/Metabase

Deliverables

1. GitHub repo with ETL scripts and dashboard configs.
2. KPI dictionary and metric definitions document.
3. Forecast dashboard with filterable business views.

Project Timeline & Deadlines

- Week 1: Data cleaning, KPI design.
- Week 2: Funnel and conversion analytics.
- Week 3: Forecast modeling and validation.
- Week 4: Dashboard polish, QA, and handover.
